QV Naked Deodorant is a fragrance-free, hypoallergenic anti-perspirant from Ego Pharmaceuticals designed for sensitive skin. The aluminium-chlorohydrate formula controls underarm wetness and odour without fragrance, alcohol or other irritants found in mainstream products. Available in roll-on format.

Details

What is QV Naked Deodorant?

QV Naked Deodorant is part of Ego Pharmaceuticals' QV Naked range - fragrance-free, dye-free, lanolin-free personal care products formulated for sensitive skin and people with eczema, dermatitis or fragrance allergies. The anti-perspirant uses an aluminium-chlorohydrate roll-on formula to control underarm wetness and odour without any of the perfume, alcohol or harsh additives that trigger reactive skin.

QV Naked Deodorant benefits

- Fragrance-free, dye-free, lanolin-free.
- Anti-perspirant action - reduces underarm wetness.
- Gentle enough for eczema-prone and shaved skin.
- Hypoallergenic pharmacy-grade formula.
- Alcohol-free, soap-free, paraben-free.
- Suitable for daily use on all skin types.

Active ingredient

- **Aluminium Chlorohydrate** - reduces sweat by temporarily blocking eccrine sweat glands and kills odour-causing bacteria.
- Water-based gentle carrier.
- No fragrance, colour, lanolin, alcohol or parabens.

How to use QV Naked Deodorant

Apply to clean, dry underarms in the morning or after showering. For maximum effect, apply at night - aluminium chlorohydrate takes 6 to 8 hours to fully bind to sweat duct cells. Allow 30 seconds to dry before dressing to avoid transfer to clothing. Avoid applying directly after shaving or to broken skin.

Who is QV Naked Deodorant for?

- People with sensitive skin or fragrance allergies.
- Eczema, dermatitis and rosacea sufferers.
- Those who react to standard supermarket deodorants.
- Pregnant women avoiding fragranced personal care.
- Teenagers with newly active sweat glands and sensitive skin.
- Anyone preferring fragrance-free daily routine products.

Warnings and precautions

- For external use only.
- Do not apply to broken or freshly-shaved skin.
- Discontinue use if irritation occurs.
- Avoid contact with eyes.
- Store below 30 degrees Celsius.

Frequently asked questions

What is QV Naked Deodorant made of?

QV Naked Deodorant contains aluminium chlorohydrate as the active anti-perspirant, in a water-based gentle carrier. It is free from fragrance, colour, lanolin, alcohol and parabens - the typical triggers for sensitive-skin irritation. The QV Naked range across body wash, anti-perspirant, shampoo and conditioner shares the same fragrance-free formula philosophy.

Is QV Naked Deodorant safe for eczema sufferers?

Yes - QV Naked is one of the most-recommended anti-perspirants for eczema-prone and sensitive skin in Australia. The fragrance-free hypoallergenic formula avoids the typical triggers (perfume, alcohol, dyes) that flare eczema. Apply to fully-healed underarm skin; avoid use on actively inflamed or broken skin during a flare.

Does QV Naked Deodorant contain aluminium?

Yes - QV Naked contains aluminium chlorohydrate, which is what gives it the sweat-blocking anti-perspirant action. The "Naked" in the name refers to being fragrance-free and free from common irritants, NOT aluminium-free. If you specifically want aluminium-free, this is not the right product.

Can I use QV Naked Deodorant after shaving?

Wait at least 30 minutes after shaving before applying any anti-perspirant including QV Naked, to avoid stinging on micro-cuts. Many users apply anti-perspirant at night and shave in the morning (or vice versa) so skin has time to recover between the two.
