Details

Difflam Gel can be used for the temporary relief of pain and inflammation that may occur in acute soft tissue injuries such as sprains, strains, sports injuries (eg. tennis elbow), tendonitis and bursitis.

Active Ingredient:

Benzydamine. (Benzydamine belongs to a family of medicines known as non-steroidal anti-inflammatory drugs (NSAIDs). They work to reduce pain and inflammation in the body by reducing the production of hormone-like substances that promote the inflammatory response. Benzydamine does not treat the underlying cause of the inflammation, however, and should not be used for extended periods of time without medical advice. Benzydamine also possesses local anaesthetic activity.)

Important

You must not rely on the information on this site as an alternative to medical advice from your medical physician or other qualified healthcare provider. Consult your healthcare provider immediately if you think that you may have a medical emergency or for the diagnosis and treatment of injuries. Always seek the advice of your physician or other qualified healthcare provider before starting any new treatment or with any questions that you may have regarding a medical condition or injury.
